Kingdom in Peril

Middle School Next Generation Science Standards Alignment Document

WHAT STUDENTS DO: Explore the arrangement of Sun, Earth, and Earth’s Moon necessary to generate eclipses.

Students will assume the role of a 17th century monarch who must learn and understand eclipse phenomena to save the kingdom from revolt. Students will explore the arrangement of the Sun, Earth, Moon system, and inclination of the Moon’s orbit necessary to generate solar and lunar eclipse patterns experienced on Earth. They will explore the shadow zones and likelihood of observing these phenomena.

NRC FRAMEWORK/NGSS CORE & COMPONENT QUESTIONS

WHAT IS THE UNIVERSE AND WHAT IS EARTH’S PLACE IN IT?

NGSS Core Question: ESS1: Earth’s Place in the Universe

What are the predictable patterns caused by Earth’s movement in the solar system?

ESS1.B: Earth and the Solar System

INSTRUCTIONAL OBJECTIVES (IO)

Students will be able to

IO1: Explain predictable eclipse patterns using a model to discover and demonstrate the evidence of phenomena at different scales such as the Moon’s inclination (orbital plane) in combination with the position of the Sun, Earth, Moon system.
1.0 About This Activity

How Students Learn: Science in the Classroom (Donovan & Bransford, 2005) advocates the use of a research-based instructional model for improving students’ grasp of central science concepts. Based on conceptual-change theory in science education, the 5E Instructional Model (BSCS, 2006) includes five steps for teaching and learning: Engage, Explore, Explain, Elaborate, and Evaluate. The Engage stage is used like a traditional warm-up to pique student curiosity, interest, and other motivation-related behaviors and to assess students’ prior knowledge. The Explore step allows students to deepen their understanding and challenges existing preconceptions and misconceptions, offering alternative explanations that help them form new schemata. In Explain, students communicate what they have learned, illustrating initial conceptual change. The Elaborate phase gives students the opportunity to apply their newfound knowledge to novel situations and supports the reinforcement of new schemata or its transfer. Finally, the Evaluate stage serves as a time for students’ own formative assessment, as well as for educators’ diagnosis of areas of confusion and differentiation of further instruction. The 5E stages can be cyclical and iterative.
2.0 Instructional Objectives, Learning Outcomes, Standards, & Rubrics

Visit https://infiniscope.org/ for access to the digital learning experience, lesson plans, standards alignment documents, and additional resources.

Instructional objectives and learning outcomes are aligned with:

- Achieve Inc.’s, *Next Generation Science Standards (NGSS)*
- National Governors Association Center for Best Practices (NGA Center) and Council of Chief State School Officers (CCSSO)’s, *Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects*

The following chart provides details on alignment among the core and component NGSS questions, instructional objectives, learning outcomes, and educational standards.

- Your **instructional objective (IO)** for this lesson align with the NRC Framework and NGSS.
- You will know that you have achieved these instructional objectives if students demonstrate the related **learning outcomes (LO)**, also aligned with the NRC Framework and NGSS.
- You will know the level to which your students have achieved the learning outcomes by using the suggested **rubrics**.

**Important Note:** This lesson is color-coded to help teachers identify each of the three dimensions of NGSS. The following identifying colors are used: **Practices are blue**, **Cross-Cutting Concepts are green**, and **Disciplinary Core Ideas are orange**.

This color-coding is consistent with the NGSS Performance Expectations and Foundation Boxes.

**Quick View of Standards Alignment:**

This alignment document provides full details of the way in which instructional objectives, learning outcomes, 5E activity procedures, and rubric assessments were derived through, and align with the Next Generation Science Standards (NGSS). For convenience, a quick view follows:
WHAT IS THE UNIVERSE AND WHAT IS EARTH’S PLACE IN IT?

NGSS Core Question: ESS1: Earth’s Place in the Universe

What are the predictable patterns caused by Earth’s movement in the solar system?

ESS1.B: Earth and the Solar System

**IO1:** Explain predictable eclipse patterns using a model to discover and demonstrate the evidence of phenomena at different scales such as the Moon’s inclination (orbital plane) in combination with the position of the Sun, Earth, Moon system.

| LO1a: | Use a model to discover and explain the arrangement of the Sun, Earth, Moon system to generate eclipses. |
| LO1b: | Evaluate the credibility of arguments provided by advisory for the cause of solar and lunar eclipses based on ways of knowing. |
| LO1c: | Use a model to discover and explain the relationship between umbral diameter and likelihood of viewing an eclipse from Earth. |
| LO1d: | Use a model to investigate and explain the relationship of the Moon’s inclination and the pattern of observed solar eclipses over time. |

**PRACTICES:**

1. Developing and Using Models
2. Analyzing and Interpreting Data
3. Constructing Explanations and Designing Solutions
4. Obtaining, Evaluating, and Communicating information

Scientific Knowledge is Based on Empirical Evidence

**DISCIPLINARY CORE IDEAS:**

1. ESS1.A: The Universe and Its Stars
2. ESS1.B: Earth and the Solar System

**CROSSCUTTING CONCEPTS:**

1. Patterns
2. Cause and Effect: Mechanism and Prediction
3. Scale, Proportion, and Quantity
4. Systems and System Models

Scientific Knowledge Assumes an Order and Consistency in Natural Systems

Science is a Way of Knowing
3.0 Learning Outcomes, NRC Framework, NGSS, Common Core, & 21st Century Skills Connections

The connections diagram is used to organize the learning outcomes addressed in the lesson to establish where each will meet the Next Generation Science Standards, Common Core Standards, and the 21st Century Skills and visually determine where there are overlaps in these documents. See NGSS Alignment Document and Common Core State Standards Alignment Document for details on their specific alignments.

LO1a: Use a model to discover and explain the arrangement of the Sun, Earth, Moon system to generate eclipses.

LO1b: Evaluate the credibility of arguments provided by advisory for the cause of solar and lunar eclipses based on ways of knowing.

LO1c: Use a model to discover and explain the relationship between umbral diameter and likelihood of viewing an eclipse from Earth.

LO1d: Use a model to investigate and explain the relationship of the Moon’s inclination and the pattern of observed solar eclipses over time.

4.0 Evaluation/Assessment

Use the (N) Kingdom in Peril Alignment Rubric as a formative and summative assessment, allowing students to improve their work and learn from mistakes during class, but also providing final assessment of the learning activities. The rubric evaluates the activities using the Next Generation Science Standards (NGSS).

5.0 References

**ESS1.A: The Universe and Its Stars**
Patterns of the apparent motion of the Sun, the Moon, and stars in the sky can be observed, described, predicted, and explained with models. (MS-ESS1-1)

**ESS1.B: Earth and the Solar System**

**Scientific Knowledge Assumes an Order and Consistency in Natural Systems**
Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation.

**Science Addresses Questions About the Natural and Material World**
Science limits its explanations to systems that lend themselves to observation and empirical evidence.

**Science is a Way of Knowing**
Science is a way of knowing used by many people, not just scientists.

Science knowledge has a history that includes the refinement of, and changes to, theories, ideas, and beliefs over time. *(Connection to High School Crosscutting Concepts)*

**Developing and Using Models**
Use a model to predict and/or describe phenomena.

**Analyzing and Interpreting Data**
Analyze and interpret data to provide evidence for phenomena.

**Constructing Explanations and Designing Solutions**
Construct an explanation that includes qualitative or quantitative relationships.

**Patterns**
Patterns can be used to identify cause and effect relationships.

**Cause and Effect: Mechanism and Prediction:**
Cause and effect relationships may be used to predict phenomena in natural or designed systems.

**Scale, Proportion, and Quantity**
Phenomena that can be observed at one
between variable that predict(s) and/or describe(s) phenomena
Construct an explanation using models or representations.

This model of the solar system can explain eclipses of the Sun and the Moon. (MS-ESS1-1)

scale may not be observable at another scale.

**LO1d:**
**Use a model to investigate and explain the relationship of the Moon’s inclination and the pattern of observed solar eclipses over time.**

**Planning and Carrying Out Investigations**
Collect data to serve as the basis for evidence to answer scientific questions.

**Developing and Using Models**
Use a model to predict and/or describe phenomena.

**Analyzing and Interpreting Data**
Analyze and interpret data to provide evidence for phenomena.

**Constructing Explanations and Designing Solutions**
Construct an explanation that includes qualitative or quantitative relationships between variable that predict(s) and/or describe(s) phenomena

Construct an explanation using models or representations.

**ESS1.A: The Universe and Its Stars**
Patterns of the apparent motion of the Sun, the Moon, and stars in the sky can be observed, described, predicted, and explained with models. (MS-ESS1-1)

**ESS1.B: Earth and the Solar System**
This model of the solar system can explain eclipses of the Sun and the Moon. (MS-ESS1-1)

Patterns
Patterns can be used to identify cause and effect relationships.

Cause and Effect: Mechanism and Prediction:
Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Scale, Proportion, and Quantity
Phenomena that can be observed at one scale may not be observable at another scale.
